Double Chamber Air Motor

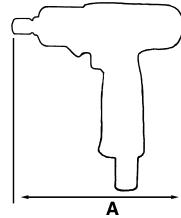

Red Rooster impulse wrenches are driven by a double chamber air motor. This motor generates a high number of pulses per second. Thus the torque is reached even faster, the tightening times are shortened and at the same time the repeatability is increased.

The power output is delivered by a Twin-Drive Roller Blade Pulse Unit. This special designed mechanism reduces noise and vibration levels and improves the effectiveness of the pulses. The cost-effectiveness is increased by the simplified design of the rotor cylinder and the front plate.

- ▶ Hydraulic impulse unit with X-Shape sealing improves repeatability.
- ▶ Easy torque adjustment.
- ▶ Faster power development due to double-chamber air motor with high number of pulses.
- ▶ Reduced workload due to reduced vibration and low noise levels.
- ▶ Smooth-running trigger.
- ▶ Reduced air consumption – reduced CO₂ emission.

For impulse wrenches we recommend power sockets and extensions with sleeve drive – less tolerance, less wear for a permanently constant power output. In order to achieve maximum productivity, accuracy and durability, it has proven itself to use impulse wrenches up to approx. 80% of their capacity.
