

# QM Software Torque Tool Manager

## The perfect database for the control of torque tool calibration

Torque Tool Manager software is calibration and certification specifically designed to work with System 4, System 5 and Torq-Tronics digital torque testers. It will fulfill your TS 16949 and ISO calibration certificate requirements far more cost-effectively than manual record keeping systems.

TTM stores standard calibration routine specifications and protocols that can be downloaded to the tester for immediate use in tool testing. Choose from standard calibration routines or customize your own to assure proper test procedures and accuracy – TTM allows you to create and store custom calibration routines for use on tools with non-standard requirements.

TTM error-proofs calibration procedures and virtually eliminates retesting due to tester setup error; the downloaded specifications perform the preparation for the test. TTM downloads the proper parameters to your S/R tester, and sets the tester up for the tool. The software will only accept test results consonant with the requirements; failure to follow the test protocol causes immediate software response and technician notification.

TTM keeps complete records for each tool, including calibration date, serial number, tester and transducer serial numbers, operator, "As Found" and "As Left" test results, NIST traceability numbers, and all other data required for ISO or QS compliance. TTM displays the results of each test immediately upon receipt from the S/R tester! It records, analyzes, and displays updated information and "Pass" or "Fail" for each test.

TTM schedules future calibrations based on user-selectable calibration intervals, and provides a list of torque tools due for calibration. Certifications are printed in a clear and logical format, and include all test and traceability information.

TTM requires minimal computer resources, and is fully Y2K compliant. Requires serial port for connection to the tester. Runs on Windows 3.1, 95, 98, 2000, ME, and XP. Available operating language is english only.

- System compatibility: Windows® 3x/9x/2000/Me/XP.
- Required free storage space: x MB HDD, y MB RAM.
- Requires serial port for connection to the tester.
- Operating language(s): engl.
